

Safety Notice

Brush Mate Fluid 250 ml

Batch number: H-5748

Brush Mate Fluid is a product to be used with the Trade 20. The vapour from the bottle, when released into the Trade 20, keeps wet paint brushes stored inside pliable for reuse, without the need to clean them.

There is a small percentage of this batch in the market where the caps have not fully engaged with the child safety mechanism. This product contains a flammable liquid which can cause skin irritation, eye damage and be dangerous if swallowed.

What should I do?

- Make sure caps are fully tightened so that the safety mechanism engages.
- For extra peace of mind, we recommend checking all bottles of Brush Mate Fluid you may have to ensure the cap is secure.

We would like to apologise to customers for any inconvenience.
